Applied ML and data analyst focused on detecting irregular behavior in complex systems, building reproducible analytical workflows, and uncovering behavioral anomalies in large datasets.

EXPERIENCE

Bizowie, Pittsburgh, PA — Software Analyst

July 2025 - December 2025

- Analyzed ERP event logs, transactional data, and workflow patterns to identify behavioral outliers, irregular interactions, and unexpected system states.
- Reconstructed event sequences and replicated edge-case behaviors to determine root causes across product logic, integrations, and user behavior.
- Developed automated validation routines and regression checks that surfaced anomalies, inconsistent behavior patterns, and system-level regressions.
- Investigated atypical and adversarial user behavior by reproducing edge-case interactions, automation-like actions, and rule-breaking scenarios during QA to expose high-risk system behaviors.

Washington County IT Department, Washington, PA — Service Learning Project

January 2025 - April 2025

- Designed and implemented a web-based asset mapping system using HTML, CSS, and tabular data structures that enabled more efficient tracking and auditing of county devices.

Jaster, Pittsburgh, PA — Product Development Intern

June 2024 - August 2024

- Built a Django pipeline that scraped and processed data from Spotify and Genius APIs, generating vectorized lyric representations for downstream ML experimentation in content recommendation.

Norwin School District, North Huntingdon, PA — Summer IT Intern

June 2023 - August 2023

- Installed, configured, and validated operational readiness for district hardware while maintaining device inventories and resolving technical issues.

Washington & Jefferson College, Washington, PA — Computer Science Peer Tutor

August 2023 - May 2025

- Assisted students with coursework involving Java, Python, Databases, and Data Analytics, reinforcing computational concepts through guided instruction.

EDUCATION

Washington & Jefferson College, Washington, PA — Bachelor of Computing & Information Studies Emphasis: Data Science | Minors: Mathematics, German

August 2021 - May 2025

- Cumulative GPA: 3.74

PROJECTS

Worldwide Cybersecurity Trends Analysis — Python, Numpy, Seaborn, Pandas, Sklearn, Tableau

- Analyzed multi-year cyberattack datasets to identify global behavioral patterns, correlations, and irregular activity.
- Built Naive Bayes classifiers to predict likely attacker/target pairs and periods of heightened activity.
- Developed Tableau dashboards to visualize risk trends and communicate findings.

NCAA D3 Track Analysis — R, ggplot2, dplyr, rvest, http

- Scraped athlete performance data from public databases and engineered clean datasets using dplyr pipelines.
- Created regression models to predict performance outcomes and analyzed statistical deviations across events.

LLM Storytelling Study — PyTorch, Transformers, QLoRA

- Fine-tuned a Mistral 7B model using QLoRA for controlled narrative generation and conducted comparative NLP analysis using feature extraction and statistical techniques.
- Developed a documentation site explaining methods and findings for an undergraduate audience and for academic review.

Aquaculture Simulation — Python, NumPy, Matplotlib

- Modeled multi-variable biological systems including fish growth, nutrient cycling, and plant development.
- Visualized time-series outputs and analyzed stability conditions of simulated environments.

SKILLS

- **Programming:** Python, R, Java, Lua
- **Data Analytics & Machine Learning:** Pandas, NumPy, scikit-learn, statistical modeling, anomaly detection, regression & classification, Bayesian methods
- **Data Engineering and Tools:** PostgreSQL, MySQL, SQL querying, Jupyter, Google Colab, Git, Docker
- **Visualization:** Tableau, Matplotlib, ggplot2, Seaborn
- **Other:** Agile workflows, QA methodologies, API analysis, technical documentation, release processes
